

About the FLHealthCHARTS Community Map

The Community Map provides quartile maps of census tracts, ZIP codes and counties. The majority of data available on the Community Map is sourced from the Florida Department of Health, Bureau of Vital Statistics and the US Census Bureau.

Please note that the data in the community map is displayed in 5-year time periods. Census tract boundaries can change every ten years. **All data for the time periods of 2015-2019 and earlier use 2010 census tract boundaries. All data for the time periods of 2016-2020 and later use 2020 census tract boundaries.** Records from the years 2016, 2017, 2018 and 2019 will be reported in their 2010 census tract boundary when selecting 2015-2019 and earlier. These same records will be reported in the 2020 census tract boundary their address is located in when selecting 2016-2020 and later.

Life Expectancy	Life Expectancy	Life Expectancy	Rates	Not Available	Death data are from Florida Bureau of Vital Statistics. Population data are from the UMass Donahue Institute and the Florida Legislature Office of Economic and Demographic Research. Life expectancy is a theoretical estimate of the average number of years from birth a person is expected to live. It is based on current death rates by age group. Persons moving into or out of a geographic area, getting older and changes in death rates may change this estimate. Life expectancy is calculated using the South East Public Health Observatory (SEPHO) method as documented in: Eayres DP, Williams ES, Evaluation of methodologies for small area life expectancy estimation, J Epidemiol Community Health 2004;58:243-249. NA - indicates the data are not sufficient for computing a valid estimate of life expectancy. Life Expectancy is computed when there are at least 50 deaths, a population of at least 5,000 and a standard error less than 2.
