Table T-2	Reported Induced Terminations of Pregnancy by Reason, by Gestation Weeks, Florida, 2001 .....	174

## INTRODUCTION

This report summarizes data compiled from the original records/reports which were filed with the Office of Vital Statistics (VS) as required by law. These include records/reports of live births, deaths, fetal deaths, marriages, dissolutions of marriage, and induced terminations of pregnancy. Standard forms recommended by the U.S. Public Health Conference on Records and Statistics are for the most part used for records of live birth, death and fetal death.

Responsibility for filing birth records lies with the physician, midwife or other attendant. Funeral directors, or other persons acting as such, are legally charged with filing death and fetal death (20 or more weeks gestation) records. These documents are then submitted to local registrars who in turn forward them to VS. Marriage and dissolution records are received by VS directly from the various courts. Reports of induced terminations of pregnancy are received from the facilities or individuals who perform such procedures.

### **HISTORICAL BACKGROUND:**

This marks the 84th year of statewide collection of birth and death records, which began in 1917. Marriage and dissolution records have been filed with VS since June 1927.

### **COMPLETENESS AND QUALITY OF DATA:**

Tabulation of data for this annual report was begun after allowing a reasonable time of two months for receipt of late documents. A few records/reports are received after tabulation and thus are not included. These records/reports represent a very small fraction of the total, and their omission does not materially alter the facts presented. The quality of data presented in this annual report is directly related to the completeness, accuracy, and processing associated with the source documents, registration procedures, and statistical reporting systems.

### **AVAILABILITY OF DATA:**

In addition to data presented here and on the internet web site, data in greater detail, either from unpublished tables or from special statistical tapes, are available upon request on a fee-for-service basis. The Florida Department of Health Internet web site which contains this annual report is: <http://www.doh.state.fl.us>

### **RESIDENT AND RECORDED EVENTS:**

Data on births and deaths are tabulated according to both the usual "place of residence" (events occurring to Florida residents regardless of the place of occurrence) and the "place of occurrence" (events occurring in Florida regardless of the usual place of residence). The former are referred to as "resident" events and the latter as "recorded" events. Prior to 1933 only recorded data are available.

Varying interpretations of the "usual place of residence" by Florida's many seasonal visitors and military families may influence the accuracy of resident tabulations to some extent, since the residence stated on the record is normally accepted without question. For births and fetal deaths, the mother's residence is used when it differs from the father's residence.

Data on marriage and dissolution of marriage records and reports of induced terminations of pregnancy are by place of occurrence only; there is no interstate exchange of these records/reports. However, Florida dissolutions of marriage are granted only to legal residents.

## **POPULATION:**

The resident midyear July 1 population estimates for 1996 to 2001 used for various rate calculations in this Annual Report were obtained from the Florida Consensus Estimating Conference. These estimates are being utilized pursuant to the data standardization resolution adopted by the Governor and Cabinet of the State of Florida. The population estimates for each year are based on the estimates produced by the Winter Demographic Estimating Conference. Based on the 2000 U.S. Census, estimates for 1991 through 2000 were determined to be aberrant and have been adjusted accordingly in this Annual Report.

Resident midyear July 1 population estimates for 1986 to 1995 were obtained from the Florida Population and Demographic Forecasts provided by the Office of Planning and Budgeting, Executive Office of the Governor. The population estimates for 1970 to 1985 were obtained from the Bureau of Economic and Business Research, University of Florida.

## **RACE:**

Race entries are usually counted as stated on live birth, death, fetal death, and marriage certificates. Designations such as "Hispanic" are classified as "white." Designations such as "bi-racial," "multi-racial," "nonwhite," or "mixed" are classified as "other entries."

Since 1989, the National Center for Health Statistics (NCHS) has classified live births and fetal deaths according to the race of the mother only. As a result of this change and for purposes of comparability, vital statistics data in this report have been modified and are based on the race of the mother for all live birth and fetal death data.

In examining trends for related indicators such as infant deaths, low birthweight, and unwed births, it is important to use the same race methodology throughout the time period being analyzed. As a result of the change in methodology from the use of the race of the child/fetus to the use of the race of the mother, some of the nonwhite births or fetal deaths (based on the race of child/fetus) will now be classified as white births (based on the race of the mother). This change will probably result in a slight decrease in the white infant death rate and an increase in the nonwhite infant death rate.

According to the U.S. Census Bureau, "Race and Ethnic questions are among the most technically complex and publicly controversial questions asked in the decennial census." Over the past three decades, the Census Bureau's definitions and coding processes have changed. The 1970 Census for Florida showed a population that was 15.3 percent black and 0.4 percent for all other nonwhite races. The 1980 Census showed 13.8 percent black and 2.2 percent for all other nonwhite races. This increase in the other nonwhite races results mainly from changes in the Census Bureau's definitions. After 1980, the Census Bureau corrected its data, and many persons, primarily white Hispanics, who had been listed as "others" were reclassified, and revised 1980 data for Florida had 13.8 percent black and 0.8 percent for all other nonwhite races. While the 1990 Census showed 12.2 percent black and 4.7 percent for all other nonwhite races, the 2000 Census showed 14.6 percent black and 7.4 percent for all other nonwhite races.

## **UNKNOWN:**

Data in this publication may include persons whose age, race or gender may be unknown or not reported. As a result, the totals for these data may be greater than the sum of the components.

**CAUSE OF DEATH:**

The underlying cause of death is determined from death certificate medical information in accordance with procedures established by the World Health Organization (WHO) and NCHS. Standardized codes are assigned from the International Classification of Diseases (ICD). To keep abreast of changes in medical knowledge, the ICD is revised approximately every ten-fifteen years. Revisions and years used in Florida are:

<u>Revision</u>	<u>Years</u>	<u>Revision</u>	<u>Years</u>
Second .....	1917-1920	Seventh .....	1958-1967
Third .....	1921-1929	Eighth .....	1968-1978
Fourth .....	1930-1940	Ninth .....	1979- 1998
Fifth .....	1941-1948	Tenth.....	1999-
Sixth .....	1949-1957		

Due to these revisions, some of which involve major changes, year-to-year comparisons of deaths by cause can be misleading, unless such comparisons span a period of years in which only one revision was used or in which the changes from one revision to another were minor.

The Tenth Revision contains major modifications in many sections, so that more or less deaths are now (Tenth Revision) assigned to certain causes than under the Ninth Revision rules. To permit more accurate comparisons, NCHS coded a sample of 1996 U.S. deaths by both the Ninth and Tenth Revision rules. The results were grouped by major causes and, for each of these, the number of Tenth Revision deaths was divided by the number of Ninth Revision deaths to produce a comparability ratio. For example, the comparability ratio for Malignant Neoplasm is 1.0068. This means the Tenth Revision coding of 10,000 death certificates will produce about 68 more Malignant Neoplasms than would the Ninth Revision coding. The comparability ratios for 113 selected causes of death may be found on pages xi through xiii.

**AGE-ADJUSTED DEATH RATE (AADR):**

The Age-Adjusted Death Rate (AADR) is a summary rate of deaths that facilitates the comparability of rates for areas or population subgroups with different age distributions. These rates are presented as per 1,000 or 100,000 population. AADR published in this report are the rates that would have been observed if the age-specific death rates for the given year had prevailed in a population whose age distribution was the same as that of the standard population. Through 1990 the population of the United States in 1940 was used as a standard for computation of AADR using the direct method. For 1990, and 1991 forward, the projected 2000 standard million population of the United States is used as a standard for computation of AADR using the direct method. The specified age intervals are under 1, 1-4, 5-14, 15-24, 25-34, 35-44, 45-54, 55-64, 65-74, 75-84, and 85 years and over for the years 1970 through 2001.

**COMPUTATIONS AND FOOTNOTES:**

The following procedures and symbols are used throughout this report:

- (1) All rates and ratios are rounded to the nearest tenth.
- (2) All rates and ratios that calculate to less than 0.05 are printed as "0.0."
- (3) Undefined/anomalous rates/ratios, i.e., those with denominators of zero, are printed as "—."
- (4) Statistically unreliable rates and ratios are those with denominators less than 100.
- (5) For 1990 and forward, Age-Adjusted Death Rates (AADR) are standardized using the direct method of standardization, to the U.S. projected 2000 standard million population.
- (6) NA is an abbreviation for not available.

ICD-10 vs. ICD-9 -- COMPARABILITY RATIOS FOR 113 SELECTED CAUSES OF DEATH:

Cause of Death	ICD-10 Codes	ICD-9 Codes	Comparability Ratio

## RATES AND FORMULAE

**Age-adjusted death rate (AADR):** Number of deaths occurring among a population adjusted to the projected 2000 standard million population of the United States using the direct method. An AADR is used to control for differences when comparing two or more populations or the same populations over time.

Sum of the products of age-specific death rates with standard population proportion

**Age-specific rate:** Number of events occurring to a specific age group per 1,000 or 100,000 population of the specified age group.

$$\frac{\text{Number of events to specific age group} \times 1,000 \text{ (or 100,000)}}{\text{Estimated midyear population of specific age group}}$$

**Cause specific death rate:** Number of deaths due to a specific cause per 100,000 population.

$$\frac{\text{Number of deaths from a specific cause} \times 100,000}{\text{Estimated midyear population}}$$

**(Crude) birth rate:** Number of live births per 1,000 population.

$$\frac{\text{Number of live births} \times 1,000}{\text{Estimated midyear population}}$$

**(Crude) death rate:** Number of deaths per 1,000 population.

$$\frac{\text{Number of deaths} \times 1,000}{\text{Estimated midyear population}}$$

**(Crude) divorce rate:** Number of divorces per 1,000 population.

$$\frac{\text{Number of divorces} \times 1,000}{\text{Estimated midyear population}}$$

**(Crude) marriage rate:** Number of marriages per 1,000 population.

$$\frac{\text{Number of marriages} \times 1,000}{\text{Estimated midyear population}}$$

**Fetal death rate:** Number of fetal deaths (20 weeks or more gestation) per 1,000 live births plus fetal deaths.

$$\frac{\text{Number of fetal deaths} \times 1,000}{\text{Number of live births} + \text{number of fetal deaths}}$$

**Fetal death ratio:** Number of fetal deaths (20 weeks or more gestation) per 1,000 live births.

$$\frac{\text{Number of fetal deaths} \times 1,000}{\text{Number of live births}}$$

**General fertility rate:** The total number of births in a year per 1,000 female population, aged 15-44 years.

$$\frac{\text{Number of live births} \times 1,000}{\text{Estimated midyear female population aged 15-44 years}}$$

**Infant mortality rate:** Deaths to individuals less than 1 year of age per 1,000 live births.

$$\frac{\text{Number of infant deaths} \times 1,000}{\text{Number of live births}}$$

**Maternal mortality rate:** Number of deaths due to complications of pregnancy, childbirth, abortion, or the puerperium (ICD-10 O00-O99) per 10,000 live births.

$$\frac{\text{Number of maternal deaths} \times 10,000}{\text{Number of live births}}$$

**Natural increase:** The difference between the number of live births and the number of deaths.

$$\text{Number of live births} - \text{number of deaths}$$

**Neonatal mortality rate:** Deaths to individuals less than 28 days of age per 1,000 live births.

$$\frac{\text{Number of deaths} < 28 \text{ days} \times 1,000}{\text{Number of live births}}$$

**Percent live births to unwed mothers:** Percent of unwed live births to the total number of live births.

$$\frac{\text{Number of live births to unwed mothers} \times 100}{\text{Number of live births}}$$

**Percent low birth weight:** Percent of live births weighing less than 2500 grams to the total number of live births.

$$\frac{\text{Number of low weight live births} \times 100}{\text{Number of live births}}$$

**Percent very low birth weight:** Percent of live births weighing less than 1500 grams to the total number of live births.

$$\frac{\text{Number of very low weight live births} \times 100}{\text{Number of live births}}$$

**Perinatal mortality rate:** Fetal deaths (20 weeks or more gestation) plus neonatal deaths (occurring in the first 28 days of life) per 1,000 live births plus fetal deaths.

$$\frac{\text{Number of fetal deaths} + \text{number of neonatal deaths} \times 1,000}{\text{Number of fetal deaths} + \text{number of live births}}$$

**Post-neonatal mortality rate:** Number of infant deaths of age 28 through 364 days per 1,000 live births.

$$\frac{\text{Number of infant deaths aged 28 through 364 days} \times 1,000}{\text{Number of live births}}$$

**Note:** Although totals may include persons whose age, race, or gender may be unknown, the process of "imputation" (using an algorithm to assign a known value to an unknown value) is not used in calculating any rate, ratio, or percentage.

**Population**

## POPULATION

- Historically, midyear population projections have been used as the basis for various rate calculations. Based on the 2000 Census, population estimates for 1991 through 2000 were determined to be aberrant and have been adjusted accordingly in this Annual Report. Further, race questions on the 2000 Census permitted multiple responses rather than just a single response as in past decennial Census. As a result, shifts occurred from the traditional white-only and black-only categories to a multiple-race category. What is unknown is the degree of shifting from the traditional single-race categories to the multiple-race category. Midyear estimates for 2001 were obtained from the Florida Consensus Estimating Winter Conference prepared November, 2001 and were used for rate calculations in this Annual Report.
- In 2001, Florida's population rose to a record high of 16,410,669. This represents a 2.1 percent increase from the 2000 population of 16,075,747.
- The population has risen 26.0 percent since 1990 and 66.8 percent since 1980. It has more than doubled since 1970 and more than tripled since 1960.
- In 2001, whites accounted for 77.8 percent of the population, and nonwhites accounted for 22.2 percent of the population.
- Increases in the population occurred for all race/gender groups. Both white males and white females increased by 2.0 percent. Nonwhite males increased by 2.4 percent and nonwhite females increased by 2.5 percent.
- Floridians aged 65 years and older made up 17.5 percent of the population. Those aged 14 years and younger comprised 18.9 percent.
- The number of persons 75 years and older was 1,402,443 or 8.5 percent of the population.
- A person born in Florida in 2001 can expect to live 77.8 years. This value increased slightly from 77.7 in 2000.
- Although the life expectancy remained constant for white males and white females, it increased for nonwhite males. Life expectancy decreased for nonwhite females. However, white females still have the highest life expectancy of the four groups and nonwhite males have the lowest life expectancy.

**Live Births**

## LIVE BIRTHS

- In 1995, Florida's resident live births dropped to 188,535, the lowest number for the past ten years. The number of resident live births increased slightly in 1996 and then climbed again in 1997 through 2000. The number rose to a record 205,800 in 2001.
- The resident birth rate dropped from 12.8 births per 1,000 population in 1998 to 12.6 births per 1,000 population in 1999, increased again to 12.7 in 2000, and then decreased again to 12.5 in 2001.
- In 2001, the resident birth rate for whites was 11.9 births per 1,000 population, and 14.8 births per 1,000 population for nonwhites.
- From 2000 to 2001, total resident births to mothers aged 18 and under decreased from 8.0 percent to 7.5 percent of the total resident live births.
- From 2000 to 2001, the percentage of resident births to both white mothers and nonwhite mothers aged 18 years and under decreased. However, the percentage of resident births for nonwhite mothers (11.5) was almost twice the percentage for white mothers (6.1).
- Of the resident live births in 2001, 8.2 percent had a birthweight of less than 2,500 grams (5 lbs. 8.2 oz.) and 1.6 percent had a birthweight of less than 1,500 grams (3 lbs. 4.9 oz.).
- Birthweights of 4,000 grams (8 lbs. 13.1 oz.) and over accounted for 8.1 percent of the total resident live births.
- One out of every three resident live births (32.0%) was to an unwed mother. For blacks, two out of every three births (67.4%) were to unwed mothers; among white mothers, one out of every three births (30.9%) was to an unwed mother; and among mothers of other races, only one out of every four live births (22.6%) was to an unwed mother.
- Of the live births to unwed mothers, 16.7 percent were to women 18 years and younger.
- Mothers of Hispanic origin accounted for 24.1 percent of the resident live births.
- Almost ninety percent (87.4%) of the resident live births to nonwhite mothers were to black mothers. Black mothers accounted for 22.9 percent of the total resident live births.
- Of the resident live births, 98.7 percent occurred in hospitals. Physicians were attendants in 89.2 percent of those hospital births.
- In 2001, 83.1 percent of all mothers received prenatal care in the first trimester.
- Of black mothers, 72.3 percent had 12 or more years of education, compared to 80.5 percent of white mothers and 83.0 percent of mothers of other races.
- Of the mothers aged 15-19 years, 20.3 percent had one or more previous live births.
- Resident live births to mothers aged 18 years and under accounted for 7.5 percent of the total, while mothers aged 35 years and over comprised 14.2 percent of the total.

# Fetal and Infant Deaths

## FETAL AND INFANT DEATHS

- Both the number of resident fetal deaths (20 or more weeks gestation) and the ratio of resident fetal deaths to resident live births have decreased from last year.
- Resident fetal deaths among both whites and nonwhites decreased by 0.4 percent from 2000 to 2001.
- Of the 1,668 fetal deaths, 16.8 percent occurred to mothers residing in Miami-Dade County.
- Nearly one of every five resident fetal deaths occurred to a mother of Hispanic origin.
- About one of every ten fetal deaths occurred to a mother who was aged 18 years or under.
- In 2001 both the overall number and rate of resident neonatal deaths (under 28 days) increased. The number increased slightly both for whites and for nonwhites.
- The neonatal death rate increased from 4.5 per 1,000 live births in 2000 to 4.8 in 2001. This represents less than half the rate of 1980 (9.7).
- The nonwhite neonatal death rate (8.2) is more than twice the white rate (3.6).
- There was an overall increase in infant deaths (under one year). The resident infant mortality rate increased slightly from 7.2 deaths per 1,000 live births in 1998 to a rate of 7.3 in 1999, decreased to 7.0 in 2000, but increased back to 7.3 in 2001.
- The resident infant mortality rate has dropped 24.0 percent since 1990 and is about half the rate of 1980.
- The resident infant mortality rate for nonwhites (12.2) is more than double the infant mortality rate for whites (5.5).
- Resident infants of Hispanic origin accounted for 14.6 percent of all infant deaths.
- Of the total resident deaths occurring within the first year of life, 65.6 percent were less than 28 days old. Furthermore, 38.7 percent were less than one day old.
- The leading causes of resident infant deaths in 2001 were Perinatal Conditions, Congenital Anomalies, and Sudden Infant Death Syndrome. These causes accounted for 77.2 percent of all resident infant deaths.

Deaths

## DEATHS

- The International Classification of Diseases Tenth Revision (ICD-10) was used for coding the 1999 through 2001 underlying cause of death. Changes from the previously used ICD-9 to the ICD-10 revision can make year-to-year comparisons misleading. ICD-10 contains major changes so that more or less deaths are now assigned to certain causes than under ICD-9 rules. Causes which changed the most include Alzheimer's disease, syphilis, and pneumonia. See pages x through xiii for further explanation and detailed comparability ratios.
- Through 1990 Age-Adjusted Death Rates (AADR) were calculated using the 1940 standard million population. For 1990, AADR calculations used both the 1940 and the projected 2000 standard million population. For 1991 and forward, AADR calculations used only the projected 2000 standard million population.
- In 2001, Florida resident deaths increased to a record high 167,181; the increase from 2000 was 2.7 percent.
- The overall resident death rate per 1,000 population increased slightly. The rate remained constant for white males and nonwhite males, but increased for white females and nonwhite females.
- Of all resident deaths, 8.7 percent were to persons of Hispanic origin.
- Among whites, cremations outnumbered burials 50.4 percent to 33.8 percent. For blacks, burials outnumbered cremations 73.3 percent to 17.2 percent. For others, cremations outnumbered burials 48.6 percent to 38.8 percent.
- Heart disease was the leading cause of death — almost one of every three deaths.
- Malignant Neoplasm (Cancer) was the second leading cause of death accounting for almost one of every four deaths.
- Unintentional Injury (Accident) was the leading cause of death for 1-4, 5-9, 10-14, 15-19, 20-24, 25-34, and 35-44 year olds, accounting for 29.4 percent of the deaths in these age groups combined.
- There were 151 fewer H.I.V. deaths in 2001 than in 2000 – an 8.4 percent decrease.
- The resident H.I.V. death rate for nonwhite males (34.3 per 100,000 population) is more than the rates for white males, white females and nonwhite females combined.
- H.I.V. was the third leading cause of death in persons 25-34 years of age, accounting for 9.3 percent of the total deaths — down from 12.9 percent in 2000.
- The homicide death rate increased for white males and white females, but decreased for nonwhite males and nonwhite females. The rate for nonwhite males was more than double the combined rate for white males and white females.
- The major external causes of death (Unintentional Injury, Suicide, and Homicide) accounted for 6.1 percent of all resident deaths.
- Malignant Neoplasm (Cancer) was the leading cause of death for 45-54, 55-64, and 65-74 year olds — 34.8 percent of the total deaths in these age groups combined.

<sup>2</sup> Preliminary Data.

Age-Adjusted Death Rates (AADR) for 1920-1990 use the 1940 standard million population; 1990 data also show the rates (in parentheses) based on the 2000 estimated standard million population. AADR for 1991-2001 use the 2000 estimated standard million population.

	ICD-9: E960-E969	1991	-	1,447	737	704	10.9	6.6	33.7	

\* Due to change from the 9th to the 10th revision of the International Classification of Diseases (ICD), 1991 categories have been adjusted to be comparable with 2001. National comparability ratios are presented above (and on pages xi - xiii) to adjust for discontinuities between ICD-9 and ICD-10 categorizations and coding.

Age-Adjusted Death Rates (AADR) for 1950-1990 use the 1940 standard million population; 1990 data also shows the rate (in parenthesis) based on the 2000 estimated standard million population. AADR for 1991-2001 use the 2000 estimated standard million population. ICD revision used: 1950 (ICD-6), 1960 (ICD-7), 1970 (ICD-8), 1980-1998 (ICD-9), and 1999-2001 (ICD-10). Homicide data for 1998 and prior years include Legal Intervention.

GRAPH D-13: RESIDENT HOMICIDE DEATH RATES PER 100,000 POPULATION,  
BY RACE AND GENDER, FLORIDA, 1991-2001

GRAPH D-14: PERCENT DISTRIBUTION OF RESIDENT EXTERNAL CAUSES OF MORTALITY, BY RACE, FLORIDA, 2001

\*Other External category includes Legal Intervention, Undetermined Injury, War Operations & Sequelae, and Medical & Surgical Care Complications.

CHART D-16: RESIDENT MATERNAL DEATHS AND RATIOS PER 10,000 LIVE BIRTHS, BY RACE, FLORIDA, CENSUS YEARS 1950-1990 AND 1991-2001						
YEAR	NUMBER OF DEATHS <sup>1</sup>			RATIOS <sup>2</sup>

# Marriages and Dissolutions of Marriage

## MARRIAGES AND DISSOLUTIONS OF MARRIAGE

- From a record high 158,783 in 1997, the number of marriages decreased in 1998 and 1999, then increased in 2000, and then increased again in 2001 to a total of 153,298.
- The marriage rate per 1,000 population decreased from 10.6 in 1997, to 9.2 in 1998, to 8.7 in 1999, rose to 9.0 in 2000, and then increased again to 9.3 in 2001.
- April was the most popular month for marriages with 18,098 marriages performed.
- After decreasing for four consecutive years, then increasing and decreasing the next two years, respectively, the number of dissolutions of marriage increased in 1999, 2000, and again in 2001.
- Since 1980, the dissolution rate has declined 28.8 percent despite an overall increase in the number of dissolutions.
- The dissolution of marriage rate had declined steadily since 1980, reaching a rate of 5.3 per 1,000 population in 1996. In 1997 the rate increased to 5.5 per 1,000 population, but then declined to 5.3 in 1998, declined again to 5.2 in 1999, declined to 5.1 in 2000, and then increased slightly to 5.2 in 2001.
- Of the 153,298 marriage ceremonies conducted in 2001, the reported race of the bride and of the groom was the same in 134,998 (88.1%) of the marriages. This is a decrease of 2.1% from 2000.
- Of the 85,259 dissolutions of marriage in 2001, over half (54.7%) affected no minor children.
- Over 4 of every 10 dissolutions of marriage occurred to couples married between 5 and 14 years.
- The marriage rate in Florida is over 1  $\frac{3}{4}$  times the dissolution rate.

CHART M-1: MARRIAGES AND DISSOLUTIONS OF MARRIAGE, AND RATES PER 1,000 POPULATION, FLORIDA AND UNITED STATES, CENSUS YEARS 1920-1990 AND 1991-2001						
YEAR	MARRIAGES			DISSOLUTIONS <sup>1</sup>		
	FLORIDA		U.S.	FLORIDA		U.S.
