

### About the FloridaCHARTS.com Death Count by Month Query System

The Death Count by Month Query System provides counts of deaths from 1970 to the present. Data provided in this query system are limited to the count of all resident deaths by month and by county. Provisional data is updated every day at approximately 5:00 a.m. When final data is published for the year, the term “provisional” is removed and that data will not change.

Causes of death are provided for the international standard diagnostic cause groups (see World Health Organization) which are used to classify diseases and record many types of health and vital records including death certificates. In this system, if there are no values for the variable selected, then no data will be displayed. Starting with 2003, the sum of deaths from all counties will not equal the total number of resident deaths due to an unknown county of residence on some records.

### Pivot Table Field List for Modifying and Creating Reports in the Death Count by Month Query System

| Measures  | Availability | Description                 |
|---|--------------|-----------------------------|
| <i>Note: Expand the measures symbol (Σ) to view the options in the online system.</i> |              |                             |
| Resident Deaths   | Count        | Deaths to Florida residents |

| Row, Column, and Filter Variables | Description   |
|-----------------------------------|---|
| Residence County                  | Florida County of Residence – Lists 67 counties (1970 forward) County where the decedent lived. |
| Year                              | 1970 forward  |
