

About the FLHealthCHARTS.gov Marriage Query System

The Marriage Query System provides counts and rates of marriages from 1989 to the present. Provisional data is updated every day at approximately 5:00 a.m. In this system, if there are no values for the variable selected, then no data will be displayed. Where row, column and filter variables appear to be duplicated, they actually reflect data from each of the spouse fields on the record. The data within this query system is sourced from the Florida Department of Health, Bureau of Vital Statistics.

To present data consistent with Florida legislation and current certificates of marriage and dissolution of marriage, the term spouse is used rather than bride and groom/wife and husband. Each of the spouse fields represents a different partner in the marriage or dissolution. However, neither field is exclusively designated to the husband or wife.

Pivot Table Field List for Modifying and Creating Reports

Measures	Availability	Description
<i>Note: Expand the measures symbol (Σ) to view the options in the online system.</i>		
Number of Marriages	Count	The number of marriages
Marriage Rate	Rate	The rate of marriage
